

Fibraworld

Our fiberglass. Your solution.

ENGLISH VERSION

Who we are?

Fibraworld is a bosnian producer of FRP pultruded profiles with high mechanical characteristics. With more than 480 Km exported in Europe every year, we cover with our products a big part of the European market, especially concerning Railways and Telecommunication sectors.

Once you installed it, you will forget it.

Why FRP is better?

- Maintenance Free
- Electrical Insulator
- Thermal Insulator
- Fire Resistance
- Corrosion Resistance
- Chemical Resistance
- Mechanical Strength
- Impact Resistance
- Electromagnetic Transparency
- Lightweight (35% aluminum | 75% Steel)
- Dimensional Stability
- Color Flexibility
- Workability
- Long Life Cycle
- Versatility

How it's made?

The pultrusion technology is a continuous molding process, that permits to produce a wide range of composites profiles with constant cross-section and with unlimited length. As opposed to extrusion, which pushes the material, pultrusion pulls it out from the heated mold.

Some advantages of this process are the fast and therefore economic production, the possibility to change resins and fibers in order to produce tailored products, and the very high structural properties of the final profile.

**Coming together is a beginning.
Keeping together is progress.
Working together is success.**

Henry Ford

A close-knit team of 40 people and mutual respect between colleagues, allow Fibraworld to offer a fast and flexible service. We are always available to customer needs.

Where Fibraworld's FRP is used?

- Military
- Transportation
- Constructions
- Chemical Processing
- Cooling Towers
- Electrical Applications
- Infrastructures
- Telecommunications
- Mining
- Oil & Gas
- Paper Industry
- Sports

Thank you.
